Kodak provides an extensive range of products for use by the photo-hobbyist in the home or photographic club darkroom.

The black-and-white products include a full range of printing papers, both fibre-base and resin-coated base, and of differing contrasts and surface finishes. There are various Hobby-Pacs, developers and fixers which are applicable to the processing of these papers and also the wide range of 'Kodak' Black-and-White Films.

Colour papers are available in a number of different types and surface finishes to suit the most critical photo-hobbyist's requirements. In this colour products section there are also kits and individual chemicals for the processing of either colour papers or colour films. Besides conventionally-processed colour papers, this section includes 'Kodak' EKTAFLIX 'PCT' Products for the easy production of colour prints from either colour negatives or colour slides, using a single-solution activator.

Darkroom equipment available from Kodak includes a comprehensive range of filters, available in sets or singly, for colour correction, colour and light balancing, and colour printing. There is also a darkroom safelamp and safelight filters suitable for all 'Kodak' sensitized products which allow the use of safelights.

Kodak provides an information service through its Customer Relations Department which deals with all aspects of photography using 'Kodak' products. There are leaflets available on many techniques and topics of interest to the photo-hobbyist.
