## Kodagraph Autopositive Paper

*IS A PRODUCT OF*

Eastman Kodak Company  
Rochester 4, N. Y.

**Architects, builders, and engineers** tell us that in designing buildings and in plant layout work, a few basic designs can often be used over and over merely by changing dimensions, reversing the plan, or adding special detail such as partitions, utilities lines, etc. You yourself may like to work this way—but naturally want to accomplish these results without continually retracing your basic drawings.

**So here's a suggestion:** Have us make duplicate tracings on Kodagraph Autopositive Paper for you—reversing the design, if you wish. Then all your draftsmen have to do is to add the new detail or dimensions to these. In this way, all the costly, time-consuming retracing is avoided!

**You'll find Kodagraph reproductions are easy to work on.** They make splendid printing masters. They're long lasting. And their cost is surprisingly low! Why not send in your drawings—and your Kodagraph order—today?
