

Place	Date 1918	Hour	WAR DIARY <i>or</i> INTELLIGENCE-SUMMARY. <i>(Erase heading not required.)</i>	Army Form C. 2118. 13th. Australian Field Ambulance. June 31st. May 1918.
			Remarks and references to Appendices	
QUERRIEU	1st.		All Map Reference refer to SHEET 62 Summary of Events and Information	
2			13th. Aust. Field Ambulance moved out from QUERRIEU at 8 a.m. and proceed to WOOLLEN MILLS.	
WOOLLEN MILLS			DAOURS (O.1.a.3.4. 62D) taking over that station from 8th. Field Ambulance at 9. 30. a.m.	
DAOURS			Tence "A" Section, less Q.M. Transport and Clerks, with Major D.M. STEELE, MC., i/c and Capt HOPE proceeded with 2 'Sunbeam' Cars to Schoolhouse at LA NEUVILLE and took over Motor Loading Post therefrom 8th. Aust. Field Ambulance. Five squads of bearers were then despatched by Major STEELE to relieve Bearers of 8th. Aust. Field Ambulance in forward posts of this Section.	
			"A" Section Tent Subdivision, with two Officers and two Reserve Squads of bearers remained at MOTOR LOADING POST, LA NEUVILLE, where two Sunbeam Cars were stationed.	
			"B" Section, tent subdivision, less transport, with Major T.C.C. EVANS, in Charge and Major L.B. ELWELL, MC., proceeded simultaneously to Motor Loading Post at AUBIGNY with one 'Ford' Car and "C" Section Bearer Subdivision and took over from 8th. Aust. Field Ambulance. Six squads of bearers from "C" Section were then despatched by Major EVANS to relieve bearers of 8th. Aust Field Ambulance in Forward Posts of this Section. Headquarters of the Ambulance remained at the WOOLLEN MILLS. Horse Transport was located at N.5.d.5.6., where 8th. Aust. Field Amb.	
			had erected efficient parapets around the horse lines. At 4. 30. p.m. instructions received from A.D.M.S., for one Senior Medical Officer, two other ranks with one Medical Companion and one Surgical Haversack to report to Officer Commanding, 13th. Aust. Inf. Bde. Nucleus at H.28.a.2.8. for duty as R.M.O. Major TASSIE with L/Cpl. MOA and Pte. LAKE duly reported.	
do.	2nd.		Motor Loading Post occupied by "A" Section Details considered to be untenable owing to enemy shellfire. New location was accordingly selected at I.31.b.2.5. where one operating and two bell tents were erected. Personnel of "A" Section details were transferred to new location at 1.p.m. About 5 p.m. Motor Loading Post at AUBIGNY being heavily shelled, Major EVANS reported it to be unsuitable as a Motor Relay Post. "B" Section Details with equipment and cars were accordingly recalled to WOOLLEN MILLS, DAOURS, where Motor Relay post was established. Instructions received from A.D.M.S., 44th. Aust. Division to take over camp at N.4.c.9.2., and to establish there an A.D.S., with Headquarters of 13th. Aust. Field Ambulance Move to be completed by 10 .a.m. 3rd. June 1918. Capt. JEFFERIS instructed to proceed to ABBEVILLE and report to C.O., 3rd. Australian General Hospital, for duty vice Capt. A.M. PURVES reported to C.O., 13th. Aust. Field Ambulance for duty and was taken on the strength being posted to "B" Section. Two Ambulance cars (1 'Ford' and one 'Sunbeam') with three personnel reported for duty from each the 4th. and 12th. Aust. Field Ambulances.

Further to my No. 20/7 of 6th. instant - the following additional constructional works, are, in my opinion, considered necessary:-

LEFT SECTOR:

J.22.b.2.5. and J.28.c.9.0. Gasproof dug-outs to be constructed to accommodate 20 stretcher cases each in vicinity of the R.A.P's.

J.15. central. Gasproof shelter to accommodate 12 men to be constructed as bearer relay on alternative route from R.A.P's. to Alternative motor loading post at J.13.b.7.5.

RIGHT SECTOR:

O.1.a.4.2. Section of road at this point where tow-path meets bridge to be rendered fit for motor traffic.

O.5.c.3.5. Dressing room at Motor Loading post to have stretcher racks installed in order to increase accommodation.

7th. June 1918.

Major. A.A.F.C.,  
Comdg., 13th. Aust. Field Ambulance.

13th. Australian Field Ambulance:

APPENDIX NO: 6.

A.D.M.S.,

4th. Australian Division:

General Report on Routes and Alternative Routes of  
Evacuation of Casualties from 4th. Australian Divisional Front June  
1918.

Viewing the Area as a whole, evacuation of casualties  
from the present 4th. Aust. Divisional Front is complicated by various  
features in the general configuration of the country.

The main difficulties which hamper evacuation, and which  
are due to natural features of the country are:-

1. The fact that the front straddles the River Somme, which  
divides the whole area into:-
  - (a) A northern, or Left Sector.
  - (b) A Southern, or Right Sector.
2. The fact that all existing roads, leading to, and from the  
line, traverse a series of villages and towns, all of  
which are liable to heavy shelling at any moment.

Besides these two main difficulties, other complications  
due to natural causes, arise in the fact that:-

1. the Northern bank of the Somme is, for a distance of  
about 3,000 yards back from the line, overhung by high  
cliffs and towering hills, the summit of which are all  
under direct observation from the enemy.
2. The right bank of the river is, on the contrary, very  
low-lying, affording little, or no cover of any description  
for traffic proceeding to and from the line.

From the outset then, evacuation of casualties from this  
front, presents serious difficulties.

I have attempted, by an exhaustive reconnoitring of all  
existing roads and tracks, to elaborate a series of alternative routes  
and posts, which should provide against any breakdown in event of  
normal routes, which are precarious owing to natural causes, becoming  
impossible.

The Right Sector, or the southern side of the Somme, is  
administered by Major L.B. ELWELL, MC., A.A.M.C., who has his  
Headquarters at the Motor Relay of this Sector, O.L.A.3.5.

The Left Sector, or the Northern side of the Somme, is  
administered by Major D.M. STEELE, MC & Bar., A.A.M.C., who has his  
Headquarters at the Main Motor Loading Post of the Sector, J.30.b.3.6.

Each of these officers is responsible for the evacuation of casualties along the routes of his own sector, and each has personally reconnoitred all existing tracks and roads in his Sector with a view to alternative routes of evacuation.

The Scheme of evacuation, which is at present proceeding, is a along so called "Normal Routes" and is as follows shown in attached appendices 1 and 2 - Appendix No. 1 referring to the Right Sector, and No. 2 to the Left Sector.

Thus the evacuation of the two sectors proceeds rapidly and easily, each sector being entirely independent of the other, and both converging on the A.D.S., N.4.c.9.2. where is the Ambulance Headquarters.

This evacuation is rendered precarious, and on either sector, might at any moment become impossible owing to the exposed nature of the roads.

The scheme for alternative routes is as follows:-  
RIGHT SECTOR:

POSTS: 1. Should HAMELET village become heavily shelled, casualties will be carried across country to about P.12.a.8.8., where a dugout will be installed sufficiently large to accommodate 12 stretcher cases. Here a bearer relay will be stationed who will carry to Motor Loading Post on the outskirts of FOUILLOY about 0.10.b.8.  
2. Should the village of FOUILLOY be shelled so that a car cannot be kept there, the casualties will be loaded on to horse ambulance wagons at about 0.10.d.2.6.

2. Should the motor loading post at 0.17.b.2. become untenable as a car post owing to shell fire, a bearer relay will be stationed there who will carry to Reference my No. 20/23 - in page 2 RIGHT SECTOR - POSTS, subpara 2 after 'available' at end of paragraph insert the following:-

This post would probably prove extremely useful, in the event of the 8th. Aust. Inf. Brigade coming into action, either as a Motor lading post or as a bearer relay.

At 0.110.b.6.8. a turn to the right leads to the tow path on the south bank of the river, and from thence proceed direct to the car relay at 0.1.a.3.6., via the tow path.

2. Instead of turning into FOUILLOY at 0.10.b.8.0. cars will proceed to 0.15.b.3.5. and thence to the right to 0.15.a.0.9., whence a direct road leads to the car relay post at 0.1.a.3.5.

LEFT SECTOR:

POSTS: The Motor Loading Post at 1.30.b.3.6. is at present a building. A Tunnel is being constructed in

Each of these officers is responsible for the evacuation of casualties along the routes of his own sector, and each has personally reconnoitred all existing tracks and roads in his Sector with a view to alternative routes of evacuation.

The Scheme of evacuation, which is at present proceeding, is a along so called "Normal Routes" and is as follows shown in attached appendices 1 and 2 - Appendix No. 1 referring to the Right Sector, and No. 2 to the Left Sector.

Thus the evacuation of the two sectors proceeds rapidly and easily, each sector being entirely independent of the other, and both converging on the A.D.S., N.4.c.9.2. where is the Ambulance Headquarters.

This evacuation is rendered precarious, and on either sector, might at any moment become impossible owing to the exposed nature of the roads.

The scheme for alternative routes is as follows:-

RIGHT SECTOR:

- POSTS:
1. Should HAMMET village become heavily shelled, casualties will be carried across country to about P.12.a.8.8., where a dugout will be installed sufficiently large to accommodate 12 stretcher cases. Here a bearer relay will be stationed who will carry to Motor Loading Post on the outskirts of FOUILLOY about O.10.b.8.
  2. Should the village of FOUILLOY be shelled so that a car cannot be kept there, the casualties will be loaded on to horse ambulance wagons at about O.10.d.2.6.
2. Should the motor loading post at O.17.c.2.7. become untenable as a car post owing to shell fire, a bearer relay will be stationed there who will carry to O.15.d.7.9. where a motor loading post will be formed in a hollow, and where accommodation for 8 or 10 stretcher cases will be available.

ROADS:

Should FOUILLOY or AUBIGNY be heavily shelled, the direct road will become impassable. In this case the following alternatives are available.

1. At O.110.b.6.8. a turn to the right leads to the tow-path on the South bank of the river. Cars then proceed direct to the car relay at O.1.a.3.5., via the tow path.
2. Instead of turning into FOUILLOY at O.10.b.8.0. cars will proceed to O.15.b.3.5. and thence to the right to O.15.a.0.9., whence a direct road leads to the car relay post at O.1.a.3.5.

LEFT SECTOR:

- POSTS: The Motor Loading Post at I.30.b.3.6. is at present a building. A Tunnel is being constructed in

the vicinity which will be used as soon as completed.

Should the carry from the R.A.P.'s. to this post be impossible owing to shell fire, casualties must be stored at R.A.P.'s. where accommodation should be available, until shelling is over.

Should shelling continue, casualties must be carried from J.22.d.2.5. in a N.W. direction to about J.15.c.2.6. where a bearer relay will be established in dug-outs. Thence the carry is to J.13.b.2.4. where a Motor Loading Post will be established. Should this relay and carry be heavily shelled, an alternative relay will be established at J.21.c.6.7., whence the carry is direct to J.19.c. where horse wagons can be hidden in a wood.

All these alternatives are difficult owing to enemy observation and may be heavily shelled. Thus it is most important to be enabled to store casualties at the R.A.P.'s.

Should the bridges across the Somme at VAIRES become impassable, casualties will be temporarily stored at VAIRES R.A.P., J.25.d.6.2. where accommodation will be available.

Should the village of VAIK be shelled, casualties will be carried on a track through swamps to the main road at J.25.a.9.9. where a bearer relay will be stationed and thence to Motor Loading Post at J.30.b.3.6.

ROADS:

In evacuating from Middle Harbour Loading Post (I.30.b.3.6.) by car it is usual to take the lower road through CORBIE traversing O.5.b., thence through the western point of CORBIE and LA NEUVILLE. Were this road made impassable the car can take the upper road travelling west across I.36.a. and then proceeding along the road running at the side of the big wall in a westerly direction through I.35.d. and I.35.c. joining the CORBIE LA NEUVILLE Road at the western edge of CORBIE. If the road between CORBIE and LA NEUVILLE is impassable at the railway crossing or else where it is possible for the car to turn to the right at the turning about I.35.c.3.8. and across the railway at a level crossing at about I.35.a.6.6. and traverse the canal through emergency bridges and along tracks emergency emerging along the lower BONNAY-LA NEUVILLE Road and thence to our A.D.S. N.4.c.9.2.

the right towards BONNAY. From this road an emergency track passes

In the event of CORBIE and LA NEUVILLE and immediate vicinity being impassable, but yet possible to proceed by car along the upper road through I.36.a. to I.35.b.5.0. the car could then proceed to W. at roughly I.29.b.9.7. crossing the railway line and opening on the western side of the line opposite emergency artillery bridges and coming out on Lower BONNAY-LA NEUVILLE Road track also continuing across to upper BONNAY-LA NEUVILLE Road. There is also another crossing over the river by emergency Artillery bridges south of this at roughly I.29.c.8.9.

Between these bridges a good track runs parallel to the Railway line on the Western side. Track shown along line on the map on the eastern side of the line is no good. Road through BONNAY is good but there is only one good bridge over canal and Railway. There is also a level crossing over the Railway about I.23.d.9.9. with good track to BONNAY and to road from CORBIE.

Were it impossible to proceed to BONNAY because of the demolition of the route at the hairpin bend (I.35.b.7.8.) or impossible to evacuate at all along the CORBIE Road, North of river, great difficulty would arise because the road running east-west across J.19., J.20., and J.21. and roads from this to VAUX and to J.22.d. are also under observation of the enemy. They are however, all good.

In view of the many difficulties that may arise, I strongly recommend the following construction works to be undertaken, besides those already in progress, viz:-

- |                      |                            |  |
|----------------------|----------------------------|--|
| <u>RIGHT SECTOR:</u> | O.15.d.7.9.                | 1. Splinter proof shelter for Ford Car.<br>2. Gasproof shelter for 12 stretcher cases. |
|                      | O.12.a.6.8.                | Dugout to accommodate 8 men (bearer relay).  |
| <u>LEFT SECTOR:</u>  | J.28.c.6.8.<br>J.22.b.2.5. | Gas proof dugouts, each to accommodate 20 stretcher cases.                             |
|                      | J.15.c.2.6.                | Gasproof dug out for 8 men (bearer relay)  |
|                      | J.21.c.6.7.                | Gasproof dug-out for 8 men (bearer relay)  |
|                      | J.15.central.              | Fallen trees removed from road, which would then be available to wagons and cars.      |

Major, A.A.M.C.,  
Comdg., 13th. Aust. Field Ambulance.

A.D.S., N.4.c.9.2.  
12th. June 1918.

APPENDIX NO: 1.

EVACUATION FROM RIGHT SECTOR 4th. Australian Divisional Front:

R.A.P's.

Ref. Map Sheet 62D. 1/40,000.

O.6.d.6.8. (Namelet)

From each of these,  
casualties are  
'carried' without  
relays to

Motor Loading  
Post at  
O.6.d.3.5.

From both these points  
cars proceed direct  
to Motor Relay Post  
at WOOLLEN MILLS.  
O.1.a.3.5. by a road  
traversing the villag-  
es of FOUILLOY and  
AUBIGNY. From Woollen  
Mills cars proceed  
direct to A.D.S. at  
N.4.c.9.2. where is  
situated the H.Q. of  
the Ambulance.

O.12.c.2.9. (Terraces)

P.7.c.1.8. (quarry)

O.24.a.6.7. (Chalk Pit)

From here a 'carry'  
without relay to

Motor Loading  
Post at  
O.17.c.2.7.

R.A.P's.

J.22.d.2.5. (Ravine)

From each of  
these, casualties  
are carried to  
bearer relay at

Bearer Relay:

J.26 central and thence to

J.28.c.8.9. (quarry)

At this location, while  
the front is quiet a  
'Ford' car is kept, con-  
verting this post into  
a M.L.P. instead of a  
bearer relay.

J.25.b.7.2. (Vaire.)

Motor Posts:

I.30.b.2.6.

From this point cars  
proceed direct to  
A.D.S. by a road  
traversing CORBIE and  
LA NEUVILLE and pass-  
ing at I.31.b.2.6. a  
motor relay, where an  
empty car is posted.  
This car immediately  
proceeds to the M.L.P  
at I.30.b.2.6. while  
car with casualties  
continues its way to  
A.D.S. at N.4.c.9.2.

13th. Australian Field Ambulance:

20/23.

A.D.M.S.,

4th. Australian Division:

Re my "General report on Line of Evacuation" forwarded to your Office yesterday.

With regard to the location of an alternative motor loading post in the event of Post of HAMELET O.6.d.3.5. becoming untenable. In view of a memo from Major L.H. ELWELL, MC., which has just come to hand, I wish to delete from my report, the whole of para 1 which deals with this alternative post and to substitute the following, viz:-

Should the village of HAMELET become at any time heavily shelled, so that a car could not be kept there, it is almost certain the the surrounding roads and tracks, which are very exposed and low-lying, would become impassable for motor traffic simultaneously. In this case, casualties will be carried from R.A.P's. at O.6.d.6.8. O.12.c.2.9., and P.7.c.1.8., to the river bank at whe4 O.6.a.8.8. avoiding the village, and making use of the track which here exists, and on which wheeled stretchers can be used.

This track leads straight to a point on the south bank of the river, where are located two foot bridges. The river will be crossed here, and the pass path pursued to where it joins with the main motor road of the left sector at I.36.c.4.1. At this point which is a ~~met~~ sheltered and a quiet section of the road, about 2000 yards below the motor loading post at I.30.b.2.6., a shelter for 10 stretcher cases could readily be installed. ~~and~~ In event of HAMELET motor post becoming untenable, then, the casualties from the three R.A.P's. in the vicinity of HAMELET will be carried across the river, to this shelter on the main CORBIE Road, whence on a message being sent ~~to~~ the motor loading post at I.30.b.2.6. cars will be sent to clear them, ~~and~~ thus the whole of the HAMELET Traffic will be diverted into the Left Sector.

PAGE 4. RIGHT SECTOR: For Map reference O.12.a.6.8. read I.36.a.

422. Dug-out to accommodate 10 stretcher cases, instead of 8 men (bearer relay)

APPENDIX NO: 10

A.D.M.S.,

20/51

4th. Australian Division:

The following is a report from Major D.M. STEELE, MC.,  
Officer i/c Left Sector.,

"Re the New R.A.P. at VAIRES This is being constructed  
at approximately J.33. central and today I very thoroughly reconnoit-  
"red the position and area from it to VAUX. The new R.A.P. itself  
"is in an area open to machinegun fire from the enemy, certainly  
"indirect and I think direct too. It is dug down into the side of a  
"very small bank so that any one standing erect a yard or two from  
"the bank becomes exposed to observation. At night now, the area is  
"searched by a good deal of machine gun fire. In choosing a path  
"for carrying from the R.A.P., the bearers w the available ground is  
"very limited, because of lakes and marsh. For 300 yards or so from  
"the R.A.P. the bearers would be under observation and very subject to  
"to M.G. Fire by night and to 'whizz bangs' at day time. Wheelers  
"would be out of the question. A bearer Relay would be required  
"about the bridge existing at (approx) J.32.b.6.7. and a dugout  
"needed to be constructed for bearers. The ground and contour do not  
"however, lend themselves to this at all. The bridge at this point,  
"J.32.b.6.7. is quite impossible as it is for bearering. To provide  
"for emergency, too, another bridge would be needed across the canal  
"not more than 200 yards WEST. On the North side of the canal a brid-  
"ege would also have to be constructed over channels between canal  
"and VAUX. In fact, duplication of bridges is even necessary over  
"channels between main canal and VAUX for without them bearers would  
"have to proceed along the towpath as far as J.26.c.1.3. before  
"being able to carry over to VAUX post. In wet weather the first  
"part of the carry and some part of the second part would be boggy  
"and heavy.

" From our point of view, the change is a very awkward one, and  
"until this work I have mentioned in completed, our bearers could  
"not at all well clear the new post."

Lieut. Colonel.  
Comdg., 13th. Aust. Field Ambulance.

A.D.M.S.,

4th. Australian Division:

Progress Report of A.M.C. Construction work in Forward Area:A.D.S., N.4.c.9.2.

Standard dugout completed but for gasproofing and placing of stretcher racks. Tunnellers have been instructed to construct an auxiliary chamber rearward of the present one. Measurements of present chamber:-

— — — — —

RIGHT SECTOR:

M.L.P. O.15.a.5.7. Commenced three days ago; working right through 24 hours per diem. Accommodation for car and deep dugout for bearers and 20 stretcher cases.

M.L.P. Chalk Pits O.17.c.3.7. The two large tunnels completed with air vents and gasproofed. Shelter for car completed.

R.A.P's. at O.6.d.6.6., O.12.c.2.9., and P.7.c.1.9. Completed. Good accommodation for Ambulance Bearers.

M.L.P. and Bearer Post O.6.a.4.8. Completed with stretcher racks and gasproofed.

LEFT SECTOR:

M.L.P. and Bearer Post I.32.a.2.5. Car shelter completed. Bearers have made dugouts for themselves.

M.L.P. "Smith's Farm" I.30.b.3.5. 1st. Standard dugout (2nd. Aust. Tunnelling Co.) within one or two day's completion. 2nd. Standard Dugout (254 Tunnelling Co.) should be completed in about 5 days.

Bearer Shelter J.25.a.2.9. Completed. Gasproofing being done.

R.A.P. J.33.central. Subjudice.

R.A.P. (Sailly-le-Sec) J.28.c.8.9. Large dugout being pushed ahead rapidly by 254th. Tunnelling Co. and bearers. 12 more bearers sent today to reinforce the party.

WORKS RECOMMENDED AS STILL NECESSARY:

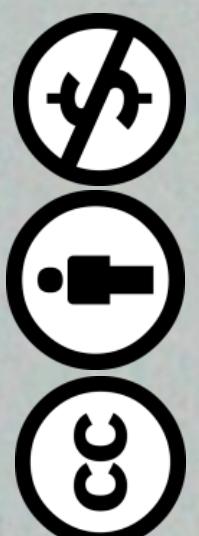

1. Swing barrel bridge, stable enough for passage of wheeled stretchers and hamp carries across SOMME Canal about O.6.a.8.6. This to be reserved for A.M.C. Only. Major L.B. MILWELL, MC, has seen O.C., 4th. Field Coy., Aust. E. who says it can be easily and rapidly constructed.

2. A dugout shelter to accommodate 12 stretcher cases and a bearer squad at I.30.a.0.6. and shelter for a car.

Could C.H. also be informed please, that the dugout at A.D.S. (N.4.c.9.2.) is ready for stretcher racks as well as gasproofing, and that the two standard dugouts at Smith's Farm (I.30.b.3.5.) are on the eve of being ready for gasproofing and racks.

27th. June 1918.
